

Texas Public Higher Education Almanac FAQs

Why did the Texas Higher Education Coordinating Board (THECB) create the *Texas Public Higher Education Almanac*?

The THECB, under directive from Governor Rick Perry, created a comprehensive accountability system for public institutions of higher education in 2004. Since its creation, the THECB has refined the system (available at www.thecb.state.tx.us) to include more metrics and information, all of which can be used by policymakers and the public to gauge the relative performance of institutions.

Although the system has been nationally recognized as a “best practice” model for providing robust data about our public institutions, the current accountability system is passive. Users must know where the data is and what data they want.

In response to this challenge, the THECB launched the *Texas Public Higher Education Almanac* in 2011 as an effort to make the data more interactive and promote a higher degree of transparency to a larger audience. Additionally, it is designed to provide an annual status of gains made relative to the state’s higher education plan, *Closing the Gaps by 2015*.

Where did the THECB get its data for the *Almanac*?

National data is collected from a variety of sources described in the *Almanac* appendix Sources of Data.

Texas institutional data is collected and certified by each institution and submitted to the THECB. Some measures, such as graduation rates, are calculated by the THECB based on data provided by the institutions.

Why does the *Almanac* not include a ranking of institutions by any of the included metrics?

The *Almanac* is designed to provide greater transparency related to the performance of public institutions of higher education on a wide variety of metrics. While the *Almanac* does provide data on where Texas ranks relative to other states, it was not intended to rank institutions. However, the data is presented in a variety of formats that allows readers to compare the relative performance of institutions across various metrics.

The national comparison six-year graduation rate at four-year institutions listed for the state of Texas is different than the Texas statewide rate for six-year graduation rate at four-year public institutions. Why the difference?

Both of these measures capture six-year graduation rates for Texas institutions. However, the federal definition of graduation rate used by the Integrated Postsecondary Education Data System (IPEDS) captures only first-time entering, degree-seeking students who enrolled in a minimum of 12 semester credit hours their first fall semester and graduated from the same institution within six years.

In contrast, the THECB data system captures the identical students over the same period of time, but includes them in the rate if they graduated from any Texas public or independent institution, regardless of where they started and ended their academic career. Not all states have the capability to capture data in this manner, so for national comparison purposes we default to the IPEDS graduation rate that is more restrictive.

Why does the *Almanac* include various graduation rates for full-time and part-time students at public universities and community colleges?

Public institutions of higher education in Texas serve diverse populations of students and include a variety of missions. These factors can impact an institution's graduation rate. The four-year graduation rate is largely recognized as an ideal for universities. The six-year graduation rate is the metric used by the U.S. Department of Education as the standard for comparing universities. The THECB also calculates 10-year graduation rates as a way to capture non-traditional students and those that may stop-out of higher education for a period of time.

The U.S. Department of Education and most other states do not report data for part-time students. However, the Texas Higher Education Accountability System allows us to track and report progress of part-time students who enroll in our institutions. Because more than one in five students at our public universities (and seven in 10 at our public community colleges) enroll part-time, it is important to include various graduation rates for these students to offer a more comprehensive view of state and institutional performance relative to this segment of our student body.

Who funded the *Almanac*?

This year's *Almanac* was a public-private partnership between the THECB, College for All Texans Foundation and Houston Endowment, Inc. The THECB compiled and organized existing data for use in the almanac. Private funding paid for the design, printing and delivery.
